Fire companies are going digital

Following changes to the Building Safety Act and in keeping with the "Golden Thread" of the Hackitt Report, fire companies are choosing to digitise their fire safety information and make compliance more transparent.

nimbusGo

nimbusGo is a 4G-enabled device that allows fire alarm engineers to effortlessly stream servicing records from a customer's fire alarm system into an infinite service log in real time.

Paired with the **Nimbus Engineer App** for Android and iOS, the engineer receives immediate feedback from the fire alarm system for simple verification of the device triggered, with the ability to supplement the test record with bespoke comments and photos.
